(72) Inventor:  
Neven, Hartmut, Senior, 52078, Aachen, DE

The Request for Examination has been filed according to § 44 of the Patent Act (PatG).

The following information has been taken from documents submitted by the Applicant.

(54) Designation: Image-Based Information Retrieval System for Search Engines for Mobile Terminals with a Built-In Camera

(57) Abstract: An increasing number of mobile telephones and computers are being equipped with a camera. Thus, instead of simple text strings, it is also possible to send images as queries to search engines or databases. Moreover, advances in image recognition allow a greater degree of automated recognition of objects, strings of letters, or symbols in digital images. This makes it possible to convert the graphical information into a symbolic format, for example, plain text, in order to then access information about the object shown.
